

BrandAIS Framework

to develop applications enhanced by AI capabilities

already-made agents to plug into your application

Broadsheet AI Agent Store

Register your application to receive an appid

1

2

3

Import `broada` module in your application and create an instance (object)

Terminal

Editor

Where would we get these
agents from?

OPTION 1:

Use BroadAI Agent Store

OPTION 2:

Build a new BroadAI Agent
(and publish on BroadAI Agents Store)

Visit <https://broad-ai.github.io/agent-store.html> and
identify one or more agent(s) for your use-cases

4

Let's say we picked Researcher Agent for our case

5

Import the agent and notify BroadcastAlert to use it at runtime

Editor

*Note: You can import many numbers of agents and pass them in this array

A dark blue circle with a white number 6 inside.

6

Register the agent with BraddAIConfig and agentConfig

Editor

npm install **broccoli-build-agent** --save

```
import BroadAI from 'broadai';
```

```
const ai = new BroadAI([/*agents*/, {/**/});
```

```
import BroadAI from 'broadai';  
  
import rs from 'broadai-agents/Researcher';  
  
const ai = new BroadAI([rs.agent], {});
```

BroadAI MAS Framework

to develop applications enhanced by AI capabilities

1 Register your application to receive an **appid**

2 Terminal
`npm install broadai broadai-agents --save`

3 Import **broadai** module in your application and create an instance (object)

Editor

```
import BroadAI from 'broadai';  
const ai = new BroadAI([/*agents*/], {/**/});
```

Where would we get these
agents from?

OPTION 1:

Use BroadAI Agent Store

OPTION 2:

Build a new BroadAI Agent
(and publish on BroadAI Agents Store)

BroadAI Agent Store

already-made agents to plug into your application

4 Visit <https://broad-ai.github.io/agent-store.html> and identify one or more agent(s) for your use-cases

Let's say we picked **Researcher** agent for our use case

5 Import the agent and notify BroadAI to use it at runtime

Editor

```
import BroadAI from 'broadai';  
import rs from 'broadai-agents/Researcher';  
const ai = new BroadAI([rs.agent], { });
```

* Note: You can import any number of agents and pass them in this array

6 Register the agent with **BroadAIConfig** and **agentConfig**

Editor

```
import BroadAI from 'broadai';  
import rs from 'broadai-agents/Researcher';  
const ai = new BroadAI([rs.agent], {/**/});  
rs.register(ai.config, {})
```

BroadAI MAS Framework
